VALTRA_S tractor series

Models S232-S262-S292-S322-S352
Foreword
We would like to welcome you to the ever-growing number of people who own a Valtra tractor; people who appreciate quality. We are proud of every tractor that leaves our factories, each being technically advanced and of a high quality.

This Operator Instruction Book contains the specifications for your new tractor. Please ensure that all operators read the instructions and follow them carefully. The pages that follow contain vital information on your tractor; please read them carefully.

Your Valtra dealer will guarantee you quality servicing and will provide you with all the assistance you need. When it comes to servicing, remember that your dealer knows your tractor best and that he wants you to be completely satisfied.

Please leave this Operator Instruction Book in the tractor if resold. The subsequent owner will need the information it contains.

All information and specifications in this Book are up to date at the time of publication. However, our ongoing policy to improve our products obliges us to reserve the right to make alterations at any time without notice. Please note that this Book relates to all models and refers to both standard and optional equipment. You may therefore find details relating to equipment that is not fitted on your tractor.

Valtra, Beauvais
# VALTRA_S tractor series

## Table of contents

1. **Tractor identification** .......................................................... 13
   1.1 Locating serial numbers .................................................. 15
       1.1.1 Locating serial numbers ........................................... 15
   1.2 Your tractor identification details ................................... 16
       1.2.1 Your tractor identification details ............................. 16

2. **Safety instructions and safety points - Warranty** ................... 17
   2.1 Introduction .............................................................. 19
       2.1.1 Introduction - Safety instructions ............................. 19
   2.2 Safety — Symbols and terms ........................................... 20
       2.2.1 Safety — Symbols and terms ..................................... 20
   2.3 Safety decals and instructions ....................................... 21
       2.3.1 Checking and replacing the safety decals and instructions 21
       2.3.2 Presentation and location of the safety decals and instructions 22
   2.4 General safety instructions ........................................... 28
       2.4.1 Awareness of the safety instructions and symbols .......... 28
       2.4.2 Operator familiarity in the use of the tractor .......... 28
       2.4.3 Filling the fuel tank .............................................. 29
       2.4.4 Getting into and out of the cab ................................ 30
       2.4.5 Mandatory procedure before dismounting the tractor ... 30
   2.5 Specific recommendations for application of the Machinery Directives 2006/42/EC on agricultural and forestry tractors as defined in 2003/37/EC. 31
       2.5.1 Specific recommendations for application of the Machinery Directives 2006/42/EC on agricultural and forestry tractors as defined in 2003/37/EC. 31
   2.6 Special safety instructions for preparing the tractor for use .... 32
       2.6.1 Protective clothing .................................................... 32
       2.6.2 Activated carbon filter information ............................. 32
       2.6.3 Safety devices and items .......................................... 34
       2.6.4 Checking the tractor ................................................. 35
   2.7 Specific safety instructions for starting the tractor .......... 37
       2.7.1 Protection of persons other than the operator ................ 37
       2.7.2 Start up safely ...................................................... 37
       2.7.3 Checks to be carried out after start-up ....................... 38
   2.8 Specific safety instructions for using the tractor ............ 39
       2.8.1 General instructions .................................................. 39
       2.8.2 Protection of persons other than the operator ......... 40
       2.8.3 Overturning .......................................................... 40
       2.8.4 Tractor towing ........................................................ 42
       2.8.5 Road use .............................................................. 42
       2.8.6 Emergency hand brake ............................................... 44
       2.8.7 Power take-off ....................................................... 44
       2.8.8 Implements ............................................................ 45
       2.8.9 Front-end loader .................................................... 47
   2.9 Specific safety instructions for servicing the tractor ....... 48
       2.9.1 Pollution warning to observe when servicing the tractor 48
       2.9.2 General instructions ................................................ 48
       2.9.3 Special instructions for cleaning the tractor ............. 48
   2.10 Protective structures ..................................................... 50
       2.10.1 Protective structures: use and accreditation .......... 50
       2.10.2 Cab or ROPS (depending on model) ......................... 50
       2.10.3 Seat belt ............................................................. 50
       2.10.4 Instructor seat .................................................... 51
Table of contents

3 Operation

3.1 Cab

3.1.1 Steering console ........................................... 59
3.1.2 Instrument panel ........................................... 60
3.1.3 Control unit .............................................. 64
3.1.4 Start switch ............................................... 65
3.1.5 Pedals ................................................... 65
3.1.6 Steering wheel ............................................ 66
3.1.7 Seat ..................................................... 66
3.1.8 Right-hand console ....................................... 71
3.1.9 Multifunction armrest .................................... 72
3.1.10 Left-hand console ....................................... 73
3.1.11 Emergency hand brake .................................. 74
3.1.12 Upper console ........................................... 75
3.1.13 Air conditioning ......................................... 76
3.1.14 Accessories sockets ..................................... 80
3.1.15 Sun visor ................................................ 81
3.1.16 Sun visor ................................................ 81

3.2 Reverse station (optional) ..................................... 82
3.2.1 Positioning the reverse station ......................... 82
3.2.2 Reverse station adjustments ............................. 83
3.2.3 Valtra Shuttle controller ................................ 83
3.2.4 Reverse station driving .................................. 84
3.2.5 Leaving the reverse station .............................. 85

3.3 Dash Control Center control screens on the instrument panel ........................................... 86
3.3.1 Using the instrument panel control screen ......... 86
3.3.2 Dash Control Center screens ............................... 86
3.3.3 Dash Control Center on tractor terminal ............. 88

3.4 Tractor terminal .................................................. 90
3.4.1 Accessing the menus ...................................... 90
3.4.2 Accessing the large driving view ..................... 90
3.4.3 Symbols in the large driving view ..................... 91
3.4.4 Split driving view ......................................... 97
3.4.5 Accessing the split driving view ..................... 97
3.4.6 Modifying the lower field displays .................... 98
3.4.7 Lower field displays: Overview ....................... 99
3.4.8 Lower field displays: PTO speed ....................... 100
3.4.9 Lower field displays: Engine speed ................. 101
3.4.10 Lower field displays: Hydraulic spool valve settings .... 101
3.4.11 Lower field displays: Hydraulic spool valve settings .... 102
3.4.12 Lower field displays: Gearbox temperature .......... 102
3.4.13 Lower field displays: Working hydraulic oil temperature .... 103
3.4.14 Lower field displays: Linkage ....................... 103
3.4.15 Lower field displays: Wheel slip ..................... 104
3.4.16 Lower field displays: Hours worked ................. 104
3.4.17 Lower field displays: Distance covered .......... 105
3.4.18 Lower field displays: Surface area ................ 105
3.4.19 Lower field displays: Fuel consumption .......... 105
3.4.20 Lower field displays: Speed regulator ............. 107
3.4.21 Accessing the hydraulic system settings view .... 108
3.4.22 Hydraulic system display symbols .................. 109
3.4.23 Adjusting screen brightness ........................... 110
3.4.24 Modifying the units of measurement ............... 110
3.4.25 Adjusting the implement width and resetting the counters .... 110
3.5 Automatic U-pilot
3.5.1 Presentation .................................................. 112
3.5.2 Operating conditions ........................................... 112
3.5.3 U-Pilot switch operating conditions ................. 112
3.5.4 U-Pilot display ............................................. 113
3.5.5 U-Pilot display symbols .................................... 113
3.5.6 Programming the U-Pilot .................................. 116
3.5.7 U-Pilot programming examples ......................... 117
3.5.8 U-Pilot: Using the program .............................. 118
3.5.9 Error codes .................................................... 119
3.6 Body
3.6.1 Opening the bonnet .......................................... 120
3.6.2 Adjusting the external rear-view mirrors .......... 121
3.7 Engine
3.7.1 Running-in ..................................................... 124
3.7.2 Filling with fuel ............................................. 124
3.7.3 Start-up .......................................................... 126
3.7.4 Start-up sheet ................................................ 127
3.7.5 Cold weather starting ........................................ 127
3.7.6 Information on the different modes of the E3 engine with AdBlue/DEF technology ......................................................... 127
3.7.7 Stopping the engine ........................................... 129
3.7.8 Engine speed ................................................... 130
3.7.9 Forward speed calibration ................................. 131
3.8 Transmission
3.8.1 General ......................................................... 132
3.8.2 Coupler clutch function .................................... 132
3.8.3 Range shifting ................................................ 132
3.8.4 Power Shuttle ................................................ 134
3.8.5 Setting speeds ................................................ 136
3.8.6 manual — mode 2 mode ...................................... 137
3.8.7 semi-automatic - mode 1 mode ......................... 138
3.8.8 automatic mode .............................................. 139
3.8.9 Tractor towing ................................................ 140
3.9 Brakes
3.9.1 Brake pedals .................................................... 145
3.9.2 Hydraulic trailer brake ...................................... 145
3.9.3 Pneumatic trailer brake ..................................... 145
3.9.4 Emergency hand brake ............................ 147
3.9.5 Electromechanically controlled brake on the steering column (ParkLock) ................................. 147
3.10 Steering ............................................................. 149
3.10.1 Steering ......................................................... 149
3.11 Front axle
3.11.1 Four-wheel drive front axle .............................. 151
3.11.2 Suspended front axle ....................................... 152
3.11.3 Permissible load on the front axle ................. 153
3.11.4 Using a scraper ............................................... 156
3.12 Differential lock .................................................. 157
3.12.1 Differential lock ............................................. 157
3.13 Power take-off
3.13.1 Front power take-off ....................................... 158
3.13.2 Rear power take-off (PTO) .............................. 159
3.13.3 Interchangeable 540 et1000 rpm PTO (flanged shaft) ......................................................... 160
3.13.4 Economy PTO ................................................ 162
3.13.5 PTO external controls ................................. 162
3.13.6 Power take-off electronic controls .......... 163
3.14 Linkage ........................................................ ... 164
3.14.1 Electronic controls for front and rear linkage .......... 164
3.14.2 Rear linkage operation ..................................... 165
3.14.3 Rear linkage controls on the fenders .......... 168
3.14.4 Front linkage ................................................. 168
4 Maintenance

4.1 Service guide

4.1.1 Maintenance

4.1.2 Lubrication chart

4.2 Cab

4.2.1 Air conditioning system: condenser

4.2.2 Air conditioning system: checking the air conditioning system

4.2.3 Air conditioning system: dryer

4.2.4 Cab air filters

4.2.5 Cab attachment

4.2.6 Windscreen washer

4.3 Engine

4.3.1 Recommended products

4.3.2 Fuel

4.3.3 Biodiesel fuel

4.3.4 AdBlue/DEF additive

4.3.5 6-cylinder Sisu engine

4.3.6 Engine oil level check

4.3.7 Draining the engine oil

4.3.8 Replacing the engine oil filter

4.3.9 Replacing the centrifugal oil filter (models equipped with Internal EGR)

4.3.10 Replacing the urea filter (models equipped with E3 engine with AdBlue/DEF technology)

4.3.11 Fuel system: fuel prefilter

4.3.12 Fuel system: fuel filter

4.3.13 Water filter

3.16 Auxiliary hydraulics

3.16.1 General

3.16.2 Description and use of the couplers

3.16.3 Auxiliary hydraulic system controls

3.16.4 Activating and deactivating the auxiliary hydraulic system

3.16.5 Selecting the joystick functions

3.16.6 Using the joystick

3.16.7 Using the control levers for the rear spool valves

3.16.8 Using predefined settings

3.16.9 Description and use of the external controls

3.16.10 Factory settings for the auxiliary hydraulic system

3.16.11 Auxiliary hydraulic system settings

3.16.12 Spool valve functions

3.16.13 Activating and deactivating position locking

3.16.14 Activating and deactivating the floating position

3.17 Wheels and tyres

3.17.1 Wheel studs

3.17.2 Adjusting the front wheel track width

3.17.3 Adjusting the 4WD front axle stops

3.17.4 Adjusting the rear wheel track width

3.17.5 Tyres

3.17.6 Dual wheels

3.17.7 Tyre pressures

3.17.8 Liquid ballasting

3.15 Linkage

3.15.1 Three-point linkage

3.15.2 Three-point linkage: Top link

3.15.3 Three-point linkage: lower links

3.15.4 Three-point linkage: lift rods

3.15.5 Three-point linkage: stabilisers

3.15.6 Multi-hole drawbar

3.15.7 Swinging drawbar

3.15.8 Stud or ball for a semi-mounted trailer

3.15.9 4-wheel trailer clevis hitch

3.15.10 Pick-up hitch

3.15.11 Pick-up hitch

3.16.1 Activating and deactivating the auxiliary hydraulic system

3.16.2 Description and use of the couplers

3.16.3 Auxiliary hydraulic system controls

3.16.4 Activating and deactivating the auxiliary hydraulic system

3.16.5 Selecting the joystick functions

3.16.6 Using the joystick

3.16.7 Using the control levers for the rear spool valves

3.16.8 Using predefined settings

3.16.9 Description and use of the external controls

3.16.10 Factory settings for the auxiliary hydraulic system

3.16.11 Auxiliary hydraulic system settings

3.16.12 Spool valve functions

3.16.13 Activating and deactivating position locking

3.16.14 Activating and deactivating the floating position

3.17 Wheels and tyres

3.17.1 Wheel studs

3.17.2 Adjusting the front wheel track width

3.17.3 Adjusting the 4WD front axle stops

3.17.4 Adjusting the rear wheel track width

3.17.5 Tyres

3.17.6 Dual wheels

3.17.7 Tyre pressures

3.17.8 Liquid ballasting

4.3.1 Recommended products

2. Safety instructions and safety points - Warranty

2.1 Introduction

2.1.1 Introduction - Safety instructions

Operator Instruction Book

**NOTE:** This Operator Instruction Book is widely published and distributed and the availability of the attachments indicated, whether fitted to the basic tractor or as an accessory, may vary depending on the country or region in which the tractor is used. To find out which attachments are available in a given region, contact a Valtra dealer.

The purpose of this book is to enable the owner and the operator to operate the tractor appropriately under normal conditions of use. Providing they follow the instructions carefully, the tractor will give many years of service in the Valtra tradition. The commissioning of equipment by the Valtra dealer on the user’s premises enables the dealer to ensure that these operating and servicing instructions are properly understood. Always consult the Valtra dealer if there is any part of this book that you do not understand. It is important that these instructions are understood and followed.

This book does not cover all operation and safety instructions relevant to the implements and accessories that may be fitted at the time of tractor delivery or later. It is essential that operators use and understand the Operator Instruction Books relating to these implements and accessories.

**IMPORTANT:** This book must always be kept with the tractor. For extra copies, contact your Valtra dealer.

This chapter in the Operator Instruction Book highlights certain basic safety-related situations which may be encountered during normal operation and servicing of the tractor and provides the information needed to handle these situations.

This chapter supplements any safety instructions given in other chapters of this book.

It may be necessary to take additional precautions, depending on the implements and accessories used and the working conditions on-site or in the servicing area. Valtra can under no circumstances exercise direct control over the commissioning, operation, inspection, lubrication or servicing of the tractor. It is therefore YOUR responsibility to take suitable safety precautions in such areas.

**WARNING:**

It is your responsibility to read and understand the instructions that appear in this chapter before using the tractor. They must then be strictly adhered to throughout the working day.

Servicing, spare parts, accessories and conditions of use

Daily servicing should become a routine, and a logbook of operating hours should be kept.

When spare parts are required, it is important to use only genuine Valtra parts. Valtra dealers supply genuine parts and can offer advice concerning their fitting and use. The use of lower quality parts may cause serious damage. Customers are advised only to purchase their spare parts from an approved Valtra dealer. In the same way, you must only use accessories specifically adapted to your tractor.

Owing to the considerable variation in operating conditions, it is not possible for the manufacturer to formulate complete or absolute assertions in its publications concerning the performance or operating methods of its machines or to accept liability for any loss or damage which may result from such assertions or possible errors or omissions.

If the tractor is to be used in abnormal conditions which could cause damage (use in deep water or in paddy fields for instance), you should consult your Valtra dealer to obtain special instructions to prevent the warranty from becoming void.

These tractors are designed only for usual farming activities (intended use). Use for any other activity is considered to be contrary to the intended use.

Strict compliance with the repairs, servicing and operating conditions as specified by Valtra is also an essential component of the intended use.

**IMPORTANT:** Valtra accepts no responsibility in the event of damage to equipment or personal injury resulting from improper use.

The tractor must only be used, serviced and repaired by personnel who have full knowledge of their specific features and who are aware of the applicable safety measures (prevention of accidents). Customers are strongly advised to contact a Valtra dealer in the event of after-sales problems and for any adjustments which may be necessary.
2.2 Safety — Symbols and terms

2.2.1 Safety — Symbols and terms

**Signal**

This safety alert symbol means CAUTION! BE ALERT! YOUR SAFETY DEPENDS ON IT!
The safety alert symbol identifies important safety notices on machines, safety signs, in instruction books or elsewhere. When you see this symbol, be alert to the risk of injury or death. Follow the instructions in the safety notice.

<table>
<thead>
<tr>
<th>SAFETY is paramount! Why?</th>
</tr>
</thead>
<tbody>
<tr>
<td>- ACCIDENTS DISABLE AND KILL</td>
</tr>
<tr>
<td>- ACCIDENTS ARE COSTLY</td>
</tr>
<tr>
<td>- ACCIDENTS CAN BE AVOIDED</td>
</tr>
</tbody>
</table>

**Terms**
The terms DANGER, WARNING and CAUTION are used with the safety alert symbol. It is essential to learn how to recognise these safety messages and to follow the recommended safety measures and instructions.

**DANGER:**
indicates an imminently hazardous situation which, if not avoided, will result in DEATH or VERY SERIOUS INJURY.

**WARNING:**
indicates a potentially hazardous situation which, if not avoided, could result in DEATH or SE-RIOUS INJURY.

**CAUTION:**
indicates a potentially hazardous situation which, if not avoided, may result in MINOR or MOD-ERATE INJURY.

The terms IMPORTANT and NOTE are not directly related to personal safety, but are used to provide additional information and advice on the operation or maintenance of equipment.

**IMPORTANT:** identifies specific instructions or procedures which, if not strictly applied, could damage or de-stroy the tractor, its equipment or the surrounding area.

**NOTE:** identifies points of particular interest for the most effective and suitable operation or repair.
2.3 Safety decals and instructions

2.3.1 Checking and replacing the safety decals and instructions

WARNING:
Never remove or obscure the safety decals and instructions.

Replace any safety decals and instructions that are illegible or missing. Replacement decals are available from the dealer in the event of loss or damage. If a second-hand tractor has been purchased, check that all of the safety decals and instructions are correct, legible and in the correct position. To do this, refer to the section on the presentation and location of these decals.
2. Safety instructions and safety points - Warranty

2.3.2 Presentation and location of the safety decals and instructions
Fig. 1.
2. Safety instructions and safety points - Warranty

- **4296944M1** ((A) fig. 1)
  - **WARNING:** Entanglement hazard in belt drives.
  - Keep hands clear of rotating parts and belts while engine is running.
  - Switch off the ignition and remove the key before working on the tractor.

- **4296971M1** ((B) fig. 1)
  - **WARNING:** Shearing hazard – engine fan.
  - Keep your hands away from the fan and the belts when the engine is running.
  - Shut off engine and remove key before performing maintenance or repair work.

- **4296967M1** ((C) fig. 1)
  - **WARNING:** Burn hazard – hot surfaces.
  - Keep away from hot engine components when engine has been running.
  - Shut off engine, remove key and wait for system to cool before performing maintenance or repair work.

- **4296952M1** ((D) fig. 1)
  - **WARNING:** Pinch point hazard
  - Keep clear of axle suspension system when engine is running. Switch off the ignition and remove the key before working on the tractor.

- **4296985M1** ((E) fig. 1)
  - **WARNING:** Pinch point hazard due to moving parts
  - Keep hands clear of linkage when pivoting coolers

- **4298645M1** ((F) fig. 1)
  - **WARNING:** Scalding hazard – high pressure steam and hot water.
  - Shut off engine, remove key and wait for system to cool before removing radiator cap.
  - Remove the filler cap with extreme care.

- **4296981M1** ((G) fig. 1)
  - **DANGER:** Runaway machine and runover hazards.
  - Only start the engine when seated in the seat with the PTO disengaged and the transmission in the neutral position.
  - DO NOT short across starter terminals to start engine.
2. Safety instructions and safety points - Warranty

- **WARNING**: Electric shock hazard – risk of personal injury and component damage.
  Remove negative (ground) cable from battery before removing starter solenoid cover and before servicing electrical system.

- **DANGER**: Lead-acid battery hazards
  - Explosive gases;
  - Corrosive liquid (sulphuric acid);
  Keep away from all naked flames or sparks
  Shield eyes when working on or around battery.
  Read safety and operating instructions in the Operator Instruction Book for further information.

- **WARNING**: Driveline separation hazard, which may result in personal injury and machine damage.
  Make sure drawbar / 3-point hitch is in correct position and check length of PTO driveshaft when attaching PTO driven equipment.
  See Operating section of manual for detailed information.

- **DANGER**: Rear overturn hazard, which may result in personal injury or death.
  Pull only from approved drawbar or lower links of 3-point hitch at horizontal position or below.
  Never pull from above rear axle centerline.

- **DANGER**: Entanglement hazard – PTO driveline.
  Stand clear of rotating shafts.
  Keep all driveline, tractor and equipment guards in place during operation.

- **WARNING**: Crushing hazard between tractor and implement.
  Stand outside of tractor tire when using external controls for 3-point hitch.
  Do not stand between tractor and implement.
2. Safety instructions and safety points - Warranty

- **4297148M1** ([N] fig. 1)
  - **WARNING:** Falling hazard
  - Do not step on PTO shield.

- **4296946M1** ([O] fig. 1)
  - **WARNING:** Runaway machine and runover hazards.
  - Shut off engine, remove key and apply park brake before leaving the tractor unattended.

- **4296958M1** ([P] fig. 1)
  - **WARNING:** Falling and crushing hazard.
  - Wear the seat belt when using the instructor seat
  - Read the Operator Instruction Book for more information:
    - The instructor seat is not intended for use by children.
    - The instructor seat must not be used to transport passengers.
    - The instructor seat must only be used by service personnel or for training purposes.

- **4296950M1** ([Q] fig. 1)
  - **WARNING:** Avoid personal injury
  - Read the Operator Instruction Book for safety information and operating instructions before operating the tractor.

- **4350916M1** ([R] fig. 1)
  - **DANGER:** Explosion hazard – contents under pressure.
  - Fill accumulators with nitrogen only – other gases may explode.
  - See Operation section of manual for detailed information.

- **4297924M1** ([S] fig. 1)
  - **DANGER:** Electrocution hazard
  - Tractors fitted with a front loader: Exercise extreme caution to avoid coming into contact with power lines.
WARNING: Towing
Carefully read the specific instructions from the Operator Instruction Book before towing the tractor.

WARNING: Long axle shafts.
Remain at a safe distance from persons and objects when driving with long axle shafts.

WARNING: Hydraulic valves
For driving on roads, raise the tools to the required height and lock the tractor’s hydraulic functions.
When the front linkage is not in use, it is essential to lock the hydraulic functions.
2.4 General safety instructions

2.4.1 Awareness of the safety instructions and symbols

Remember that you alone are responsible for safety. Good safety practices protect not only you, but also bystanders. Before using the tractor, study the instructions given in this book with care, as well as all of the safety decals and instructions fixed to the tractor: Make them an integral part of your safety procedure. Also note all the usual protective measures which should be taken when working and above all, don’t forget: Safety depends on you. You can prevent accidents which could cause serious injury or death.

**WARNING:** In some of the illustrations in this book, the safety panels and guards have been removed for reasons of clarity. Never use the tractor if these parts are not in place. If some of these parts have been removed for repair purposes, they must be refitted before use.

2.4.2 Operator familiarity in the use of the tractor

**WARNING:** The operator must not drink alcohol or take any medication that may affect his concentration or co-ordination. If taking medication, whether prescribed or not, the operator must seek medical advice with regard to his ability to operate machinery safely.

To be able to use your tractor, it is first necessary:
- to be familiar with operating an agricultural tractor
- to have been trained in the operation of the tractor that you have just purchased
- to have read and understood this entire book — always consult the dealer as soon as there is any doubt or lack of understanding
- find out about the rules and safety regulations applicable to the work you are doing. Some regulations specify that no one under the age of 16 may operate power machinery, for example. This includes tractors. It is your responsibility to know what these regulations are and to observe them in the operating area or situation. These rules include, but are not limited, to the safety instructions relating to correct operation of the tractor as described in this book.
- Do not allow children or unqualified persons to operate the tractor.
- Do not allow children to use the instructor seat.
- The instructor seat is only intended for short periods of use.
2. Safety instructions and safety points - Warranty

− **WARNING:**
In poor conditions, slow down and be extra careful, and engage 4-wheel drive if fitted.

It is important to have good knowledge of the operation of the tractor as well as all of its accessories and attached implements. Remember that rain, snow, ice, loose gravel or soft ground can change the performance of the tractor.

2.4.3 Filling the fuel tank

− Always switch off the engine before filling up.
− Do not smoke while refuelling the tractor. Keep away from naked flames *fig. 2.*

![Filling with AdBlue/DEF](image)

Filling with AdBlue/DEF

Avoid all contact with the eyes, skin and clothing.
− If swallowed. If large quantities of this product are swallowed, seek medical advice immediately. Do NOT induce vomiting unless indicated to do so by medical staff. Do not administer liquid to a person who is unconscious.
− In case of contact with skin, rinse with plenty of water and remove contaminated clothing.
− In case of contact with the eyes, rinse immediately under running water. In the event of irritation, seek medical advice.
− If fumes are inhaled, breathe in fresh air and seek medical advice, if necessary.
− Prevent AdBlue/DEF from coming into contact with other chemical products.
− Urea spillages must not be discharged into the drains.
2. Safety instructions and safety points - Warranty

2.4.4 Getting into and out of the cab

- Always use three-point contact with the tractor and face the tractor when mounting and dismounting. (Three-point contact means that both hands and one foot or one hand and both feet are in contact with the tractor at all times when getting on and off).
- Clean your shoes and wipe your hands before getting on the tractor.
- Use handrails, grab handles, ladders or steps (if fitted) when getting on and off. Do not use the control levers as a handhold.
- Do not step on pedals when getting in and out.
- Never attempt to mount or dismount a moving tractor.
- Never jump off a tractor when it is running except in an emergency.

2.4.5 Mandatory procedure before dismounting the tractor

Before getting out of the cab, whether during the course of or at the end of the working day, always:

1. Immobilise the tractor by applying the parking brake or engaging ParkLock in the locked position (closed padlock symbol) (depending on option).
2. **DANGER:** Place the reverse shuttle lever in the neutral position.
3. Disengage the front and rear PTO.
4. Lower the implements to the ground.
5. Turn off engine.
6. Remove the ignition key.
2.5 Specific recommendations for application of the Machinery Directives 2006/42/EC on agricultural and forestry tractors as defined in 2003/37/EC.

2.5.1 Specific recommendations for application of the Machinery Directives 2006/42/EC on agricultural and forestry tractors as defined in 2003/37/EC

**Hot surfaces**
Be careful of surfaces which may be hot, in particular engine and hydraulics components, during operation and servicing.

**FOPS (Falling Object Protection Structure)**
- Alternative 1 (no FOPS available): Protection against falling objects is not provided, unless clearly specified otherwise.
- Alternative 2 (optional FOPS fitted): Protection against falling objects is provided under OECD-code 10 (Energy level 1362 J). If a higher protection level is necessary, additional safety equipment should be installed on the tractor (no original equipment available).

**OPS (Operator Protection Structure)**
- Alternative 1 (no OPS available): Protection against penetrating objects is not provided, unless clearly specified otherwise.
- Alternative 2 (optional OPS fitted): Protection against penetrating objects is provided under ISO 8084 (Machinery for forestry). Before operating, check if protection is adapted to your work conditions.

**Hazardous substances**
- Alternative 1 (less cab or cab under category 1): Protection against hazardous substances (agricultural chemicals, etc.) is not provided. Personal protective equipment must be used according to the chemical manufacturer’s recommendations.
- Alternative 2 (cab under category 2): Protection against hazardous substances (agricultural chemicals, etc.) is not provided. Personal protective equipment must be used according to the chemical manufacturer’s recommendations.
  A protection against dust (category 2 of standard EN 15695) is provided under the following conditions:
  - all roof hatch, cab doors and cab windows are closed
  - cab ventilation is running
  - air filter is clean and is serviced under maintenance interval (refer to service guide).

**Instructor (passenger) seat**
- If an instructor (passenger) seat is provided, protection for the occupant of the seat is provided by the same roll-over protective structure (ROPS) that protects the operator.
  Always use the seat belt correctly adjusted.
2.6 Special safety instructions for preparing the tractor for use

2.6.1 Protective clothing

Wear all the protective clothing and equipment with which you are provided or which is appropriate for certain working conditions fig. 1.

For example, you may need:
- A safety helmet
- Goggles or a face shield
- Ear protection
- A respirator or filter mask
- Inclement weather clothing
- Reflective clothing
- Gloves suitable for the work to be carried out
- Safety footwear

DANGER:
Do not wear loose clothing, jewellery or other items and tie up long hair which could catch on controls or other parts of the tractor.

2.6.2 Activated carbon filter information

WARNING:
Due to the risk of contaminants entering the cab when the door is opened to enter or exit, use of a carbon filter is intended to supplement but not necessarily replace the use of personal protective equipment when operating in an environment containing aerosols and/or vapours, such as pesticides.

The specific chemical manufacturer’s instructions regarding personal protective equipment (PPE) must be followed. If the cab being fitted with this filter does not already have a safety sign like the one included with this filter, install the safety sign in a prominent place inside the cab in view of the operator.

This filter is designed to reduce the concentration of aerosols and vapours entering the cab. To be effective, it must have an effective seal to prevent leakage around the filter and must be used in a cab air system that does not have leaks, especially in the zone between the filter and the fan. In addition, the cab and its ventilation system must be capable of maintaining a positive pressure inside the cab and an air flow of at least 30 cubic meters per hour (18 cubic feet per minute).

The cab with carbon filter is intended to be used as only one part of a managed system of occupational health and safety, as noted below:

Operator Enclosures as Part of an Occupational Health and Safety Management System (OHSMS)

Many self-propelled agriculture vehicles have operator enclosures (cabs) for comfort and protection of the operator and riders. The cab can provide an effective physical barrier between the occupants and the environment, but that barrier must, by necessity of occupant respiration, allow air to enter and exhaust the cab. This requirement is met by the cab’s heating, ventilation and air-conditioning (HVAC) system.

The HVAC system should employ a filter through which air entering the cab is first passed for contaminant reduction. Filters should also be provided in the recirculation air-stream to reduce airborne contaminants already in the cab air space. In either application, these filters must be designed specifically for the HVAC system within which they are operating. The filters must also incorporate the correct media required to remove the specific air-borne contaminant for which it is being employed.
For such applications, the HVAC system must be of robust design, manufacture and maintenance. In such a system, fresh air and cab pressurization requirements are provided by an air supply drawn through a filter with negligible filter bypass.

Even with an appropriate cab and HVAC system, there are other opportunities for contaminates to enter the cab. While outside the cab, a person can become contaminated on his/her body or clothing. Contaminated objects can be brought into the cab. Another potential for cab contamination exists when doors or windows are open in a contaminated environment.

In any case, whenever the cab interior has been contaminated, the effectiveness of the cab to provide contamination protection will be diminished. Health and safety for agricultural machine operators as well as others working in, on or around these machines can only be addressed through a comprehensive program. Such a program is defined as an Occupational Health and Safety Management System (OHSMS). While cabs may be used as an effective engineering control within an OHSMS, this is not intended to imply that the cab alone is appropriate for any specific application.

That determination can only be made by those responsible for the OHSMS in a specific application. It is the responsibility of those charged with managing the use of the vehicle on which the cab is attached to define and manage an appropriate OHSMS, and ensure that all federal, state and local regulatory requirements are followed.

Cabs should not be used as a replacement for any other engineering control or PPE that has been specifically required by federal, state or local regulatory authorities.

**Hierarchy of Controls**
The Hierarchy of Controls, in their preferred order of action:
1. Elimination
2. Substitution of less hazardous materials, processes, operations or equipment
3. Engineering controls
4. Warnings
5. Administrative controls
6. Personal protective equipment (PPE)

**Continuous Improvement Cycle**
Cabs should only be used to control operator air contaminant exposures withing an OHSMS. This management system must consider occupational safety and health as a continuous improvement cycle that includes these on-going processes:
1. Management, Leadership and Employee Participation: This step in the cycle involves the formulation of the management system, the establishment of policy, statements of responsibility and the integration of the employees into the management system.
2. Planning: This step is based upon initial and going reviews of the management system and numerous factors affecting occupational safety and health within an organization. Included in these reviews is a review of the hazard, risks and controls and data collected to evaluate the hazards and the efficacy of the control measures. In explanatory comments, exposure measurements are included as part of the assessment processes. The results of audits and measurements are also to be reviewed.
3. Implementation and Operation: This section describes the organization components of a occupational safety and health program. It describes the hierarchy of controls mentioned above and several broad classes of management function. Among these requirements are employee training and evaluation of employee training. Furthermore, this section requires a written, clearly documented occupational safety and health program.
4. Evaluation and Corrective Actions: The section specifically requires management processes to monitor and evaluate hazards, risks and their controls. Explanatory comments note that this includes quantitative measures of worker exposure. Practically, this involves physically testing the efficiency of the cab being used as an engineering control within an OHSMS.
5. Management System Review: Management is required to review the management system to ensure its suitability, adequacy and effectiveness. This cycle includes provisions for exposure monitoring and the monitoring of control measure performance. It is the responsibility of the manager of the safety and health program to determine how worker exposure to air contaminants and other hazards are to be controlled. It is also the responsibility of this manager to take whatever actions are needed to control workplace hazards. This includes but is not limited to exposure assessment, audits of varies programs such respiratory protection, ventilation system maintenance, etc.

**Limitations of Cabs Used in Hazardous Environments:**
While it may seem that respiration (breathing) exposure would present the greatest risk for personal exposure to contaminants, this is not the case when working with pesticides. The most prevalent method of exposure for applicators and those working around agricultural pesticides is through dermal (skin) contact. Dermal contact with contaminants may occur directly from air-borne contaminants. It may also happen when contaminants are transferred from one object to another or when air-borne contaminants settle on objects that are subsequently contacted. Any surfaces in or out of the cab that have been contaminated are potential hazards for dermal exposure.

Within the cab, seats, upholstery, controls and other surfaces that become contaminated will pose such a hazard. In addition to dermal exposure, a contaminated cab interior will also pose a respiration hazard as the contaminant may, after settling on a surface, become air-borne once again whereby it may be inhaled. Recirculation filters can be used to help reduce these contaminants from the cab interior air space. When a vehicle is operated in an environment where air-born contaminants exist, the cab can be an effective engineering control for reduction of exposure risk to persons within it.

In order for a cab to be used for this purpose, it must be of appropriate design. It must also be manufactured, maintained, tested and operated according to the specific requirements defined by evaluation of the hazards. No cab should ever be considered an effective engineering control unless it has been qualified as such within a comprehensive OHSMS. While the cab manufacturer can design and manufacture a cab to physical specifications, the cab manufacturer can not qualify the cab as an appropriate engineering control for any specific application.

Site-specific information is needed to evaluate the appropriateness of control measures. To use the cab to control hazards, the managers of the OHSMS must carefully consider and evaluate the effectiveness of all engineering controls in their specific application.

The Cab as an Engineering Control
The engineering control requirements of the respiratory protection regulation may be fulfilled by the application of a cab, but this can only be done properly within an OHSMS. Elements of such a program are:
1. Assessment of the hazard with identification of the risk involved.
2. A survey of the machine and the cab involved in the hazardous operation.
3. Reviewing the cab ventilation system and the filter to ensure the filter provides the reduction in contaminants required.
4. Defining how long the filter can be used in this application.
5. Testing the cab ventilation system to ensure it provides the protection required for the operation to be performed. This also includes a review of any monitoring equipment to ensure it is working properly.
6. Repair and/or replacement of any defects or defective equipment found.
7. Retesting of the cab air system as required.
8. Recording in the appropriate log book all information regarding the test results, and repairs and replacement of parts and/or components.
9. Assessment of the effectiveness of the program at a specified time in the cycle of the activity.

2.6.3 Safety devices and items

Ensure that all safety devices and items are fitted as required and are in good condition.

**WARNING:**

The location of all these safety devices and items must be known and their use mastered. Never take off, remove or disconnect any of them.
Standard safety devices and items according to country regulations

- ROPS (Roll Over Protective Structure)
- Seat belt
- Power take-off guard
- SMV warning triangle
- Signalling lights
- Safety signs
- Fire extinguisher
- First aid kit

⚠️ WARNING:
Also make sure you know the emergency numbers.

Additional devices and items
Depending on the work to be carried out, other safety devices and items may be required; for example, guards or additional lights and signs.

2.6.4 Checking the tractor

Check the tractor and ensure that all systems are in good operational condition before beginning the working day. Pay particular attention to the points mentioned below.

- Check for loose, broken, missing or damaged parts. Ensure that everything has been properly repaired.
- Check that the seat belt is in good condition. If it is not, replace it.
- Check that implements are correctly installed.
- Check that the PTO output speed is in keeping with the implement PTO input speed.

⚠️ WARNING:
An unbalanced tractor could overturn and cause serious injury or death. Ensure that front frame counterweights, wheel weights and wheel ballasts are used as recommended by the manufacturer. Do not add extra counterweights to compensate for an overloaded tractor; the load must be reduced instead.

Check to ensure that the tractor is correctly balanced.

- Check the condition and pressure of tyres (absence of cuts and bulges). Replace worn or damaged tyres.
- Check the correct operation of the brake pedals and the parking brake. Adjust if necessary.
- Ensure that all PTO shaft locking devices are engaged.
- Ensure that the tractor PTO guard and the shaft guards are in place and operating correctly.
WARNING: Fuel or hydraulic fluid under pressure can penetrate the skin or eyes and cause serious physical injury, blindness or death. Leaks of pressurised fluid may not be visible. Use a piece of cardboard or wood to detect leaks. DO NOT USE YOUR BARE HANDS. Wear safety goggles for eye protection. If any fluid penetrates the skin, seek medical advice within a few hours from a doctor familiar with this type of injury.

WARNING: Release the pressure of the hydraulic or fuel systems before disconnecting them.

Check the hydraulic system for the tractor and the implement as well as the tractor fuel system: Correct tightening of all the unions; no damage to the lines, pipes and hoses; hydraulic systems do not cross one another. Have any leakages or damaged parts repaired or replaced.

WARNING: The liquid cooling system builds up pressure as the temperature increases. Stop the engine and let the system cool before removing the radiator filler plug.

Check the engine cooling system and add coolant if required.

- All maintenance procedures must have been complied with.
- Check that the weight of the tractor/implement assembly is less than the tractor total permissible load.
2. Safety instructions and safety points - Warranty

2.7 Specific safety instructions for starting the tractor

2.7.1 Protection of persons other than the operator

1. Before starting up, walk all the way round the tractor and any attached equipment. Ensure that no one is under it, on it or close to it.
2. Warn in advance any persons nearby that the tractor is about to start.
3. Only start up if there is nobody in the vicinity of the tractor/implement assembly. Pay particular attention to looking out for children.

2.7.2 Start up safely

General instructions

- **WARNING:** Before starting the engine, ensure there is plenty of ventilation in the area. Do not operate the engine in an enclosed space. The exhaust fumes may cause asphyxiation.

- Always start the engine from the operator’s seat.
- Adjust the seat.
- For road use, ensure that the tractor brake pedals are locked together.
- Fasten the seat belt.
- Check that the parking brake is applied or that ParkLock is engaged.
- Place the reverse shuttle lever in the neutral position and deactivate the PTO controls.
- Follow the start-up procedures described in the chapter Operation of this book.

- **DANGER:** Start the engine with the ignition key and from the operator’s seat only. Do not attempt to start the engine by short-circuiting the starter terminals: the tractor may start in gear and this could cause serious injury or death to anyone in the vicinity fig. 1.

![Fig. 1.](image)
### Starting assistance

**WARNING:**
Never use any starter fluid or aerosol sprays. This could cause an explosion and the risk of very serious injury.

#### 2.7.3 Checks to be carried out after start-up

**Controls and indicator lights**
After having started the engine, check all the controls and all the indicator lights again. Ensure everything is functioning correctly.

**WARNING:**
In case of malfunction of a control or an indicator light, resolve the problem before using the tractor.

**Mastering of the tractor**
Move slowly until you are sure that everything is operating correctly. Be certain that you have full control of the steering and brakes. If the differential is locked, unlock it before continuing your route.
2.8 Specific safety instructions for using the tractor

2.8.1 General instructions

- Tractors and implements are not toys. Always comply with the conditions of use defined by the manufacturers.
- Never exceed the tractor total permissible weight.
- Always consider the way in which the tractor is to be used and the fact that the centre of gravity of the tractor/implement assembly changes according to the load being transported or towed.
- **WARNING:** An unbalanced tractor could overturn and cause serious injury or death. Ensure that front frame counterweights, wheel weights and wheel ballasts are used as recommended by the manufacturer. Do not add extra counterweights to compensate for an overloaded tractor; the load must be reduced instead.

> Check to ensure that the tractor is correctly balanced.
- Check that the PTO output speed is in keeping with the implement PTO input speed.
- Keep all parts of your body inside the safety zone defined by the cab or by the protective structure for platform tractors.
- Operate the controls smoothly — do not jerk the steering wheel or other controls.
- Always operate the controls from the operator’s seat.
- Keep a firm grip on the steering wheel at all times, with your thumbs clear of the spokes when driving the tractor.
- Operate the tractor smoothly — avoid jerky turns, starts or stops.
- Do not turn at high speed.
- Avoid driving close to ditches and banks.
- Avoid taking slopes that are too steep.
- Reduce speed when negotiating turns and slopes and on rough, slippery or muddy surfaces.
- Carefully observe the areas surrounding the route.
- Ensure you have adequate clearance in all directions for the tractor and the implement.
- When using chemicals, follow the chemical manufacturer’s instructions for use and storage carefully.
- Adapt the tractor speed according to visibility, weather conditions and the type of terrain.

- **WARNING:** If a part breaks, loosens or does not operate correctly:
  - stop work
  - switch off the engine
  - check the machine and make the necessary adjustments and repairs before resuming work.

- **DANGER:** Do not attempt to unplug the hydraulic connections or adjust an implement with the engine running or the PTO in operation. To do so may result in serious injury or death.
2.8.2 Protection of persons other than the operator

- **WARNING:**
  A tractor is a machine with a single operator. Do not permit anyone fig. 1 to ride on the tractor or implements, including trailers, unless the implements are specially designed to carry passengers during field work. In the latter case, transport is permitted only for field work, but not for travelling on the road. In all cases, never allow a child to ride on the tractor or implements.

- When operating, attention to the environment of the tractor/implement assembly.
- Never lift loads above someone.
- Do not allow anyone to stand or pass in front of, under or behind an implement fig. 2.
- Do not allow anyone to stand between the tractor and the implement.
- Keep others away from the working area.

2.8.3 Overturning

Overturning angle

- **DANGER:**
  For your safety, never exceed the maximum angle limits listed in the table below.

  **NOTE:** These angle limits assume a maximum oil level. It is recommended to top up the oil by 15 l when working on slopes of maximum gradient.

<table>
